

SCREENING PROGRAMS

Hearing Screening 900

A hearing screening detects children who may have temporary or permanent hearing issues that can impact social, emotional, speech, language, and academic development. Our screening consists of pure tone audiometry, measuring the ability to hear sounds at normal thresholds, and tympanometry, which detects middle ear problems like fluid, infection, or eardrum perforations.

Denver Developmental Screening Test (DDST) 900

The Denver Developmental Screening Test (DDST) identifies developmental delays in children up to 6 years old. The screening covers the following areas of development: Gross motor skills, fine motor skills, language ability, and personal-social skills.

Vision Screening 900

A vision screening identifies children who may have eye conditions and vision problems that directly impacts their ability to achieve academically, socialize, and enjoy extracurricular activities. By measuring visual acuity (clarity, or seeing 20/20) and assessing binocular vision (eye-brain) function, a vision screen covers all the components of healthy vision such as visual pathway integrity and visual efficiency.

Postural & Gait Screening 900

This screening detects musculoskeletal imbalances, postural deviations, and movement irregularities that may impact a child's physical development, balance, coordination, and overall well-being. It evaluates standing posture, spinal alignment, weight distribution, foot placement, stride length, and balance. This helps identify muscular imbalances, scoliosis indicators, or improper body positioning, as well as compensatory movements that may indicate muscle weakness or joint instability.

Literacy Screening 900

Literacy screening is a structured assessment process designed to evaluate an individual's reading and comprehension skills. It is available for children in Year 1-9/ K-Grade 8. It enables educators, parents, and specialists to identify students who may require additional support and intervention in their literacy development. By detecting potential difficulties early, literacy screening helps prevent minor challenges from becoming significant barriers to academic success. Many states in the USA, mandate literacy screeners during early child development.

Family Pathway Consultation

500

- A conversational session with parents where our specialists learn about your child's needs and family goals to provide personalized service recommendations

THERAPY SERVICES

SPEECH AND LANGUAGE THERAPY

Speech-Language Therapy services are designed to support each child in developing their overall communication abilities such as enhancing speech clarity, improving oral motor skills, address expressive-receptive language skills and more. Our trained therapists provide individualized plans to help each child improve their communication abilities, while considering each child's unique linguistic and cultural background.

BILINGUAL SPEECH PATHOLOGIST

Our bilingual speech therapists provide evaluation and therapy in multiple languages, supporting children's communication development while respecting their linguistic and cultural backgrounds.

Initial Consultation (60 minutes)

3,600

- Includes therapist interaction with your child to gain insight into their speech and language abilities to help determine a support plan and discussion with parents about child's communication skills, developmental history, and any concerns you may have

Speech Therapy Sessions (30 minutes)

1,600

- Direct and indirect time with speech and language therapist (e.g., treatment, consult, observation)

Speech Therapy Group Sessions 2-4 pax. (30 minutes)

1,400

Additional Written Reports

3,200

- Frequently requested reports include: school observation reports, speech screening reports, goals and strategies for school report

THAI SPEECH PATHOLOGIST

Initial Consultation (up to 60 minutes)

2,600

Speech Therapy Sessions (30 minutes)

1,150

Speech Therapy Group Sessions 2-4 pax. (30 minutes)

1,000

Additional Written Reports

2,300

- Frequently requested reports include: school observation reports, speech screening reports, goals and strategies for school report

*Additional feedback or face-to-face minutes for observations, screens, or informal assessments will be calculated based on 15 minute increments of single speech therapy consultation fee

Sunny Start Co., Ltd. reserves the right to make adjustments to pricing at any time without further notice. However, services that have been paid prior to adjustment of prices will be honored.

OCCUPATIONAL THERAPY

Occupational therapy helps children thrive in everyday activities, focusing on enhancing skills such as handwriting, motor coordination, attention, and sensory regulation.

| | |
|---|-------|
| Initial Consultation (up to 60 minutes) | 3,200 |
| Occupational Therapy Sessions (60 minutes) | 2,800 |
| Occupational Therapy Group Sessions 2-4 pax. (30 minutes) | 1,200 |
| Additional Written Reports | 2,800 |
| <ul style="list-style-type: none">• Screening reports | |

VISION THERAPY

Our vision therapy services help children improve essential visual skills such as eye-brain function, eye tracking, focusing, and depth perception, which are crucial for reading, writing, sports, and everyday tasks. Children with poor eye-brain function or binocular vision dysfunction may skip letters or lines when reading, have double vision at near distances, or other difficulties. For this reason, they are sometimes mislabeled as dyslexic or ADHD.

ASSESSMENTS

STANDARDIZED ASSESSMENTS

Standardized assessments are empirically developed evaluation tools with established statistical reliability and validity. A standardized test is one that requires all test takers to answer the same items/questions in the same way and that is scored in a standard or consistent way, thus making it possible to compare the relative performance of individuals or groups of individuals. The choice of standardized test is upon the evaluator's discretion.

English Speech & Language Standardized Assessment with Report 25,860

- Behavioral and Voice Observations
- Optional: Oral Motor Examination
- Clinical Evaluation of Language Fundamentals - 5 (CELF-5) (5-21)
- CELF - 5 Reading and Writing Supplement (8-21)
- Comprehensive Test of Phonological Processing - 2 (CTOPP-2) (4-24)
- Written report
- Recommendations
- Therapy Goals
- 30 minutes of feedback

Thai Speech & Language Standardized Assessment with Report 7,700

- Boehm (Comprehension) Test (4-6;11)
- Semantic Test (3-7;11)
- Syntactic Test (3- 7;11)
- Optional for students over 8: Language Sample Analysis
- Written Report
- Recommendations
- Therapy Goals
- 30 minutes of feedback

English & Thai S&L Standardized Assessment with Report 32,000

- Tests as specified above
- Written reports
- Recommendations
- Therapy Goals
- 60 minutes of feedback

Literacy Learning Needs Assessments 12,500

These assessments identify individual strengths, challenges, and barriers, forming the foundation for personalized intervention. They provide a comprehensive overview of literacy skills and offer practical strategies for support. While not a formal diagnosis, they enhance understanding to tailor literacy assistance effectively.

(Approximately 2-3 hours)

- Kelly and Phillips: Literacy Placement Test (based on Orton Gillingham Principles)
- Kelly and Phillips: CLAPSAP (Conquering Literacy Accelerated Programme Skills Assessment)
- Louise Selby: Morphological Awareness Assessment
- Louise Selby: Knowledge of Morphemes Reading and Spelling Assessment
- Dr Shelley Blackwell: POM (Phonological, Orthographic, Morphological) Assessment, Contextual Spelling Error Analysis

|---|-------|
| Comprehensive Eye Exam & Binocular Function Workup For a growing child, the ability to see not only clearly, but comfortably, efficiently, and effortlessly, opens doors to countless possibilities. As 80 percent of all learning during a child's first 12 years comes through the eyes, poorly developed vision impairs learning and affects quality of life. The exam covers all the components of healthy vision, including: <ul style="list-style-type: none"> • Visual acuity • Refractive status • General eye health • Visual efficiency • Binocular function • Accommodation • Oculomotor vision | 6,400 |
| Postural Analysis & Report Assess body alignment and posture to identify imbalances. | 3,600 |
| Digitsole (Gait and Running Analysis) & Report Analyzing gait and running mechanics using advanced technology, with a comprehensive report on performance and improvement areas. | 3,000 |
| Cardiopulmonary Exercise Test (CPET) & Report Evaluate heart, lung, and metabolic function during exercise, with a report on fitness levels and potential limitations. | 6,500 |
| Body Composition Analysis & Report Measure body fat, muscle mass, and overall composition, with a report detailing health metrics and goals. | 800 |

WORKSHOPS

Parent Workshop – It Takes Two to Talk – Hanen Centre Program (up to 2 caregivers per child) by SLP

43,200

The It Takes Two to Talk Program is designed specifically for parents of young children (birth to 5 years of age) to learn practical strategies to help their children learn language naturally throughout their day together.

- Pre-program consultation (free of charge)
- ~10-12 weeks
- Small, personalized group program
- Price per child (up to 2 caregivers), additional caregivers + 5,000

Parenting Workshops by Play Therapist (up to 90 minutes)

2,000

Reflection is one way for you to show you are actively listening to your child. Aiming to promote family relationships and reduce parent-child conflicts. Parents can expect to develop a better understanding of their child's emotions and behaviors, helping the child to feel both understood and of value.

- Reflective Parenting approach
- Using positive reinforcement
- Play skills to build rapport with your child
